

The background features a dark navy blue field with abstract, overlapping shapes in vibrant magenta and deep red. Two thin, light blue lines intersect diagonally across the upper right portion of the image. The text is positioned on the left side.

AWS re:Invent

DECEMBER 2 – 6, 2024 | LAS VEGAS, NV

DEV330-R

No Python? No problem! Generative AI for the rest of us

Generative AI for the rest of us

Generative AI for all of us!

The Python paradigm

○ ○ ○

```
client = boto3.client("bedrock-runtime", region_name="us-east-1")

request_body = {
    "anthropic_version": "bedrock-2023-05-31",
    "messages": [
        {
            "role": "user",
            "content": [{"type": "text", "text": "What is 'rubber duck debugging'?"}],
        }
    ],
}

response = client.invoke_model(
    modelId="anthropic.claude-3-haiku-20240307-v1:0",
    body=json.dumps(request_body)
)

response_text = json.loads(response["body"].read())["content"][0]["text"]
```

The Java challenge

○ ○ ○

```
BedrockRuntimeClient client = BedrockRuntimeClient
    .builder().region(Region.US_EAST_1).build();

JSONObject requestBody = new JSONObject()
    .put("anthropic_version", "bedrock-2023-05-31")
    .put("messages", new JSONArray() {
        new JSONObject()
            .put("role", "user")
            .put("content", new JSONArray()
                .put("type", "text")
                .put("text", "What is 'rubber duck debugging?'"))));

InvokeModelResponse response = client.invokeModel(request -> request
    .modelId("anthropic.claude-3-haiku-20240307-v1:0")
    .body(SdkBytes.fromUtf8String(requestBody.toString()))
);

JSONObject responsePayload = new JSONObject(response.body().asUtf8String())

String text = new JSONPointer("/content/0/text")
    .queryFrom(responsePayload)
    .toString();
```

What's your primary language?

The Converse API:

Simplifying interactions across languages

Python with the Converse API

○ ○ ○

```
messages = [  
    {  
        "role": "user",  
        "content": [{"text": "What is 'rubber duck debugging?'"}],  
    }  
]  
  
response = client.converse_stream(  
    modelId="anthropic.claude-3-haiku-20240307-v1:0",  
    messages=messages  
)  
  
response_text = response["output"]["message"]["content"][0]["text"]
```

Java with the Converse API

○ ○ ○

```
Message message = Message.builder()  
    .content(ContentBlock.fromText("What is 'rubber duck debugging?'))  
    .role(ConversationRole.USER)  
    .build();  
  
ConverseResponse response = client.converse(request -> request  
    .modelId("anthropic.claude-3-haiku-20240307-v1:0")  
    .messages(message)  
);  
  
String responseText = response.output().message().content().get(0).text();
```

Real-time interaction:

Streaming responses for better UX

Python streaming

○ ○ ○

```
messages = [  
    {  
        "role": "user",  
        "content": [{"text": "What is 'rubber duck debugging?'"}],  
    }  
]  
  
response = client.converse_stream(  
    modelId="anthropic.claude-3-haiku-20240307-v1:0",  
    messages=messages  
)  
  
for chunk in streaming_response["stream"]:  
    if "contentBlockDelta" in chunk:  
        text = chunk["contentBlockDelta"]["delta"]["text"]  
        print(text, end="")
```

Java streaming

○ ○ ○

```
Message message = Message.builder()  
    .content(ContentBlock.fromText("What is 'rubber duck debugging?'))  
    .role(ConversationRole.USER)  
    .build();  
  
client.converseStream(  
    request -> request  
        .modelId("anthropic.claude-3-haiku-20240307-v1:0")  
        .messages(message),  
    ConverseStreamResponseHandler.builder()  
        .subscriber(ConverseStreamResponseHandler.Visitor.builder()  
            .onContentBlockDelta(  
                chunk -> System.out.print(chunk.delta().text())  
            ).build()  
        ).build()  
);
```

Beyond Python and Java

JavaScript, C#, PHP, Go, Rust, Kotlin, Swift, and more . . .

Let's dive into some code!

Remember: AI speaks your language
With Amazon Bedrock, every developer can be an AI developer!

Unlock AI in any language!
