

### Description

The *AWS Certified Solutions Architect – Professional* exam validates technical skills and experience in designing distributed applications and systems on the AWS platform. This full-day, advanced-level course is intended for individuals with 1) an AWS Certified Solutions Architect – Associate certification; and 2) two or more years of hands-on experience designing and deploying cloud architecture on the AWS platform. In this course, you will explore the exam's topic areas, mapping to architecting on AWS and identifying specific areas to study. The course reviews sample exam questions in each topic area and teaches you how to interpret the concepts being tested so that you can more easily eliminate incorrect responses.

### Intended Audience

This course is intended for solutions architects who are preparing to take the *AWS Certified Solutions Architect – Professional* exam.

### Course Objectives

In this course, you will learn how to:

- Understand the exam structure and question types
- Identify how questions relate to AWS architectural concepts
- Interpret the concepts being tested by an exam question
- Allocate your time studying for the *AWS Certified Solutions Architect – Professional* exam

### Prerequisites

We recommend that attendees of this course have the following:

- AWS Certified Solutions Architect – Associate certification
- Two or more years of hands-on experience designing and deploying cloud architecture on the AWS platform

### Delivery Method

This course is delivered through:

- Classroom training
- Sample exercise questions

**Note:** There are no technical lab exercises in this course.

### Duration

Full day (eight hours)

### Course Outline

This course covers the following concepts:

- Testing-center information and expectations
- Exam overview and structure
- Content domains and question breakdown
- Topics and concepts with content domains
- Question structure and interpretation techniques
- Practice exam questions
